

Rib & Block Roofing System

Why should I use Rib & Block?

Suitable for applications in all types of buildings where suspended floors are required.

The system is ideal for residential houses in particular.

Rib and Block slabs are quicker and less costly to build than traditional shuttered concrete.

Ideal composite action between lattice lintels and cast-in-situ concrete, optimising strength/material requirements for cost savings.

The best solution for complicated in shape slabs with skylight openings, cantilevers etc.

Simple and quick to install even with unskilled labour.

Highly competitive price and a large stockholding of standard items ensures short delivery times.

Rib and Block slabs are assembled by hand – no cranes or other machinery required. Hollow core slabs are very heavy and require cranes for assembly.

3Sixty Precast Concrete

is the sole Rib & Block manufacturer for Portable Floors.
